

»» Managing Chemicals in Products and Production

The Issue

Companies in the automotive industry and its supply chain face a plethora of governmental regulations, in the United States and globally, on the use and management of chemicals in the production process. To support member companies in facing this reality, we keep them abreast of existing and emerging regulations and provide an assessment of their impact. And by joining with other industrial groups to develop common processes and tools that increase the efficiency of regulatory compliance, we minimize the cost to all member companies.

What We Do

The mission of this group is to:

- Define the global impact of emerging chemical management or product stewardship regulations on the automotive industry;
- Support the development and operation of chemical reporting processes to meet both regulatory and customer requirements; and
- Interact with other automotive associations on regulatory, customer and reporting requirements.

Members Currently Involved

- DENSO International America, Inc.
- Delphi Corporation
- Ford Motor Company
- Hewlett-Packard Development Company, LP
- Honda
- Tetra Tech
- Yazaki

Collaborations

- American Chemistry Council (ACC)
- European Association of Automotive Suppliers (CLEPA)
- Global Automotive Stakeholder's Group (GASG)
- IMDS Steering Committee
- Japan Automobile Manufacturers Association, Inc. (JAMA)
- REACH Task Force
- USCAR
- Other industrial associations thru ANSI network

Get Involved

Benefits of engaging in this initiative include:

- Ability to be proactive by staying current on existing and emerging legislation (e.g. REACH, ELV Annex II, REACH-like legislation, ELV-like legislation) to know the impact on your company
- Reduce effort of compliance by networking with others in the industry to share best practices for compliance and lessons learned
- Have an impact with IMDS direction and documentation by collaborating with the Steering Committee
